

Amendments to the Claims:

This listing of claims will replace all prior versions and listings of claims in the application:

Listing of Claims:

5 Claim 1 (previously presented): An input-sensor-integrated liquid crystal display panel, comprising:

a first substrate having at least one pixel controlling circuit;

a second substrate having a touch-detecting circuit and a color filter formed on the touch-detecting circuit, being positioned on top of the first substrate, the second
10 substrate further having:

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being integral; and

a plurality of signal connecting contacts disposed on the protrusion of the second substrate, the signal connecting contacts connecting to the detecting
15 circuit for transmitting a plurality of pixel controlling signals and a plurality of touch-detecting signals;

a liquid crystal layer filled between the space formed by the first substrate and the second substrate.

20 Claims 2-5 (canceled)

Claim 6 (original): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

25

Claim 7 (canceled)

Claim 8 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the first substrate dis-coincides with the second substrate
30 and has at least one protrusion.

Claim 9 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 8 wherein the protrusion of the first substrate includes a plurality of signal connecting contacts.

5

Claims 10-11 (canceled)

Claim 12 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 1 wherein the second substrate has at least one protrusion jutting out the first substrate.

10

Claim 13 (previously presented): An input-sensor-integrated liquid crystal display panel, comprising:

a first substrate having at least one pixel controlling circuit;

15

a second substrate having a touch-detecting circuit and a color filter, being positioned on top of the first substrate, the color filter and the touch-detecting circuit being formed on different sides of the second substrate, the second substrate further having:

20

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being integral; and

a plurality of signal connecting contacts disposed on the protrusion of the second substrate, the signal connecting contacts connecting to the detecting circuit for transmitting a plurality of pixel controlling signals and a plurality of touch-detecting signals;

25

a liquid crystal layer filled between the space formed by the first substrate and the second substrate.

Claim 14 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

30

Claim 15 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

5

Claim 16 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 15 wherein the protrusion of the first substrate includes a plurality of signal connecting contacts.

10 Claim 17 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 further comprising a polarizer.

Claim 18 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 17 wherein the touch-detecting circuit is positioned between the
15 second substrate and the polarizer.

Claim 19 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 13 wherein the second substrate has at least one protrusion jutting out the first substrate.

20

Claim 20 (previously presented): An input-sensor-integrated liquid crystal display panel, comprising:

a first substrate having at least one pixel controlling circuit, and a color filter formed on the pixel controlling circuit;

25 a second substrate having a touch-detecting circuit and being positioned on top of the first substrate, the second substrate further having:

at least one protrusion jutting out the first substrate, the second substrate and the protrusion being integral; and

a plurality of signal connecting contacts disposed on the protrusion of the
30 second substrate, the signal connecting contacts connecting to the detecting

circuit for transmitting a plurality of pixel controlling signals and a plurality of touch-detecting signals;

a liquid crystal layer filled between the space formed by the first substrate and the second substrate.

5

Claim 21 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an inner side of the second substrate facing the first substrate.

10 Claim 22 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the touch-detecting circuit is positioned on an outer side of the second substrate.

15 Claim 23 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the first substrate dis-coincides with the second substrate and has at least one protrusion.

20 Claim 24 (currently amended): The input-sensor-integrated liquid crystal display panel of claim 23 wherein the protrusion of the first substrate includes a plurality of signal connecting contacts.

Claim 25 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 further comprising a polarizer.

25 Claim 26 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 25 wherein the touch-detecting circuit is positioned between the second substrate and the polarizer.

30 Claim 27 (previously presented): The input-sensor-integrated liquid crystal display panel of claim 20 wherein the second substrate has at least one protrusion jutting out
